### **EnCAP-IT's Macroencapsulation Featured in Geosynthetics Magazine**

**RICHMOND, Va., August 14, 2017** – EnCAP-IT is pleased to announce that the company's leadership team has been featured in the national publication, Geosynthetics Magazine. The article, entitled "[Using geosynthetics for macroencapsulation for CCR on-site clean closure](#)," is published in the August 2017 edition of Geosynthetics Magazine.

EnCAP-IT **safeBERM**<sup>®</sup> solutions are **Proven, Rapid, Reliable and Sustainable** options compared to traditional methods. Unlike constructing traditional berms, structural fills, or impoundment closures the **safeBERM**<sup>®</sup> solutions have an internal geomembrane envelope that completely encapsulates the fill material. Advantageously, this encapsulation enables the use of beneficial reuse material as construction fill to construct berms, structural fills, or perform closures at a cost generally less than traditional methods while dramatically increasing safety features.

The company continues to develop **safeBERM**<sup>®</sup> solutions; providing clients methods that ensure proper, long-term environmental stewardship for the communities in which they serve.

Today, the company's range of patented solutions encompasses numerous methods that utilize a wide range of byproducts produced by a variety of industries.

The company's corporate website is [www.mseberms.com](http://www.mseberms.com) .

###

EnCAP-IT is a privately held company founded in 2009 and based in Glen Allen, Virginia, which licenses its technology and services to the waste management and power industries, among others. EnCAP-IT's proprietary methods of macroencapsulation for coal combustion residuals and other production byproducts are environmentally beneficial and highly cost-effective.
